

IRAQ: Early Warning Alert and Response Network (EWARN) Snapshot № 16

Displacement Crisis in Iraq (week 34 to 35, 2015)

HIGHLIGHTS

Eighty two (82) reporting sites including fifty two (52) Internally Displaced People's (IDP) camps, nine (9) refugee camps and twenty one (21) mobile clinics submitted timely and complete weekly reports. The total number of consultations reported during week 35 was 23,260 (Male=10,541 and Female=12,719) compared to 23,345 (Male=10,605 and Female=12,440) from the previous reporting week, 34. Acute Respiratory Tract Infections (ARI) (n=15,872), Acute Diarrhea (AD) (n=2,513) and skin diseases (n=2,182) remained the leading causes of morbidity in all camps during the recent 2 weeks. Twenty nine alerts were generated, of which twenty five were from IDP camps, two from refugee camps & two from hospitals. Fifteen of these alerts were verified as true and were further investigated, appropriate response was done by the Governorates Departments of Health, WHO and the relevant health cluster partners while the remaining eleven alerts did not follow the case definition thresholds.
